SIGMIDI Foot Controller v0.1 — Design

- Illustrated assembly guide: print selection, mechanical fitting, wiring and first power-up. Editable source.
- Complete native Fusion model: all Left/Right main and modular assemblies and part libraries.
- Left enclosure: preferred electronics-on-left assemblies and manufacturing packages.
- Right enclosure: electronics-on-right assemblies.
- Front panel: dimensions, labels and display placement.
- Right main printing and Right modular assembly.
- Printing tolerances, ladder wiring and preview gallery.
- Brand assets.
- KiCad electrical schematic: editable external-board wiring, physical connector pin order and connectivity exports.

CAD uses manufacturer PCB models for the Waveshare 24382 display, Arduino Nano ESP32 and Pololu S13V10F5, and the ACJS-MHDC drawing for the dual TRS socket. Datasheets are in `fusion/datasheets/`. Printed parts use the supplied PETG 0.6 mm nozzle profiles. Physical fit, loading and thermal operation require assembly tests.
